On September 23, 2008, the US Census Bureau released the 2007 American Community Survey. The data was researched to examine the means of transportation that Minneapolis residents use to commute to work. The results show that Minneapolis ranks high compared to other US cities in alternative forms of transportation, particularly in bicycling.

Highlights of the 2007 American Community Survey Data:

- **Minneapolis held its #2 bicycle ranking out of the 50 cities with the most workers**, for its share of commuters who commute to work by bicycle, closing the gap with #1 Portland, Oregon. Minneapolis now has a 3.8% bicycle commuter mode share, while Portland has a 3.9% share.

- The estimated percentage of commuters who bicycle in Minneapolis increased from 2.5% to 3.8% between 2006 and 2007, from 4,840 to 7,200 people. **This was the largest increase in percentage points out of the top 50 cities.**

- Following Minneapolis are #3 San Francisco and #4 Seattle, with 2.5% and 2.3% bike share respectively.

- The 3.8% share of bicycle commuters has a 0.8% margin of error (3.0% to 4.6%). The 7,200 bicycle commuter figure has a margin of error of +/- 1,463 (5,740 to 8,660).

- Minneapolis ranks #15 for its share of workers who commute by bicycle out of the 442 American cities with commute data available, all with populations of more than 57,000. The top five cities are Boulder, CO (8.9%), Eugene, OR (8.5%), Chico, CA (7.4%), Berkeley, CA (7.0%), and Cambridge, MA (6.0%).

- St Paul's bicycle commute mode share increased from 1.0% to 1.4% between 2006 and 2007. St. Paul is not included in the top 50 ranking because of its population size. In the top 442 ranking however, St. Paul sits at #58. Other Minnesota cities include Duluth at #78 (1.1%), St. Cloud at #93 (1.0%), Rochester at #148 (0.7%), Plymouth at #199 (0.5%), Bloomington at #237 (0.3%), and Brooklyn Park at #324 (0.1%).

- Minneapolis ranks #9 out of the top 50 cities for *walking* commute mode share. An estimated 12,170 or 6.4% of Minneapolitans walk to work. This is down from 7.1% in 2006, but up from 5.8% in 2005.

- Minneapolis also ranks #47 out of the top 442 ranking for *walking* commute mode share. Leading that list are Cambridge, MA (20.1%), New Haven, CT (14.5%), Berkeley, CA (14.1%), Champaign, IL (13.8%), and Ann Arbor, MI (13.8%).

- Minneapolis ranks #10 out of the top 50 largest cities for people taking *public transportation* to work. An estimated 25,330 or 13.4% of residents use transit to get to work. This is up from 13.2% in 2006 and 12.5% in 2005.

- Minneapolis ranks #40 out of the top 50 largest cities for people *driving alone* to work. An estimated 115,770 or 61.1% of residents drive alone to work. This is down from 62.6% in 2006 and 62.4% in 2005.

Milestones:

- In 2005, Minneapolis and the surrounding communities were named a pilot community in the Non-Motorized Transportation Pilot Program (NTP). This brought $21.5 million in federal funds to the area to improve biking and walking. The program is run by Transit for Livable Communities. Most improvements are scheduled to be made in 2009 and 2010.

- In 2006, the Midtown Greenway bike path was completed across Minneapolis. Its first full year of operation was in 2007. In May of 2008, the Midtown Bike Center opened on the Midtown Greenway. The center was funded through a variety of public and private contributions.

- In September of 2007, a 51% increase in cyclists was measured at 9 downtown locations, when compared to a similar count conducted in September of 2003.

- In early 2008, the Bike Walk Ambassador Program launched with four full-time staff. The mission of the program is to educate people on how to bike and walk more, and drive less.

- In May of 2008, 2,500 people participated in Twin Cities Bike Walk to Work Day, the largest such event to date.

- Also in May of 2008, Minneapolis received a silver level Bicycle Friendly Community Award from the League of American Bicyclists. Among other things, the city was recognized for its bicycle culture and off-street path infrastructure.

- From April to June of 2008, a 30% increase in cyclists was measured on the Midtown Greenway, when compared to a similar count conducted from April to June of 2007.

- In October of 2008, Minneapolis Public Works and Transit for Livable Communities will release bicycle and pedestrian count data comparing counts conducted during September 2007 and September 2008.

- Minneapolis will complete its first Pedestrian Master Plan and its first Bicycle Master Plan in December of 2008. These plans are expected to improve city policies and practices for walking and biking.

- 45 miles of bikeways are funded for construction in 2009 and 2010 in Minneapolis. That amounts to a 37% increase over the current 123-mile total.

Background Information from the US Census Bureau:

The Census Bureau's *American Community Survey* is an ongoing survey that produces important statistics about our nation's people and housing. It covers the same type of information that had been collected every 10 years from the decennial census long form questionnaire. The American Community Survey eliminates the need for a separate long form in the 2010 Census.

American Community Survey data are collected continuously throughout the year and throughout the decade. This allows the Census Bureau to produce new data every year about how communities are changing. With the American Community Survey, it's no longer necessary to rely on a single *snapshot* of an area that becomes increasingly dated throughout the decade. Instead, the survey provides a moving picture of community characteristics.

The American Community Survey is sent to about 3 million addresses in the U.S. and Puerto Rico every year. In contrast, the decennial census goes to every address in the U.S. and Puerto Rico once every 10 years in years ending with "0" (e.g., 1990, 2000, 2010, etc.). Locally an estimated 5,052 Minneapolis residents were surveyed in 2007.

The Census Bureau has two ways of providing American Community Survey data: one-year estimates and three-year estimates. One-year estimates are more current, but they have a smaller sampling size (and therefore a larger margin of error). Three-year estimates have a larger sampling size (and therefore a smaller margin of error), although they are not as current. The Census Bureau will begin releasing three-year estimates in December of 2008.

Percentage of Walking Commuters in all US Cities with Commute to Work Data Available* (2007)

*The chart below contains cities that have a population of 57,000 or greater. 442 cities are ranked in the chart below. 72 cities were not ranked because the number of sample cases for the means of transportation data was too small.

Ranking	City	Percentage of Walk Commuters	Total Population
1	Cambridge city, Massachusetts	20.1%	95,736
2	New Haven city, Connecticut	14.5%	123,475
3	Berkeley city, California	14.1%	111,680
4	Champaign city, Illinois	13.8%	76,061
5	Ann Arbor city, Michigan	13.8%	116,168
6	Provo city, Utah	13.7%	118,730
7	Iowa City city, Iowa	13.4%	67,076
8	Boston city, Massachusetts	13.3%	613,117
9	Union City city, New Jersey	12.7%	67,909
10	Evanston city, Illinois	12.5%	66,600
11	Pittsburgh city, Pennsylvania	12.0%	290,918
12	Miami Beach city, Florida	11.7%	75,017
13	Muncie city, Indiana	11.3%	62,414
14	Jacksonville city, North Carolina	11.3%	71,034
15	Washington city, District of Columbia	11.1%	588,292
